Challenges	All work to be undertaken within a live nuclear environment with the highest level of security controls.

Winsulate are currently into a 3rd extension of an initial 3 year contract to provide asbestos survey and consultancy services to Urenco.

Having been on site for the last 7 years, we have developed a unique understanding of our clients operating standards and controls. Developing this understanding has been critical to the success of our appointment on this contract. Working with Urenco can be extremely challenging operationally, ensuring all appropriate site health and safety paperwork is accurate, specific and issued in a timely manner to ensure work progress is not delayed during the client health and safety approval process. On any one day, the surveying team can be faced with numerous constraints and obstacles preventing work from progressing as expected. Consequently we have had to tailor our internal processes to ensure no compromises are made regarding regulatory compliance yet enable us to be sympathetic to site and client requirements.

We have provided asbestos survey and consultancy works for Urenco and their sub-contractors over the last 7 years, and in addition to a separate asbestos removal framework, we have completed every project with zero health and safety incidents.

We remain Urenco UK's preferred asbestos consultant and contractor and are proud to continue to support such an organisation of local importance within the North West.
